LegholderRX® models

Nubs
 LegholderRX®
 standard

LegholderRX® fusion

The hemispherical nubs on the sides allow the cloth to slide easily between the brackets and the foot is stabilized on the side. | Article no. LRX2024-03

LegholderRX® standard (predecessor model)

Proven and widely used model which has been successfully on the market worldwide for many years. The „standard“ model differs from the „fusion“ model in that it has more-pointed nubs on the sides and slightly thinner brackets. | Article no. LRX2020-02

LegholderRX® extra stable

Improved foot stabilization thanks to biometrically calculated, ergonomic support surfaces and recesses for the Achilles tendon.

| Article no. LRX2024-04

Fastening straps

The specially designed **fastening straps with Velcro fasteners** enable quick and stable installation.

To ensure secure and optimum fastening, the straps must be replaced at the latest after six months of use or after 200 applications.

S: Short straps for the majority of operating tables with separate and independently movable leg sections on the right and left. **Advantage:** Simpler and more stable assembly with freedom of movement of the individual leg sections.

| Article no. LRX2020-10

L: Long straps are also suitable for operating tables without separate leg sections.

| Article no. LRX2020-11
